

## CSC 142 In-Class Exercise

For 5 points

Submit only the code for the following method:

Write a method called *printNumbers* that accepts a maximum number as an argument and prints each number from 1 up to that maximum, inclusive, boxed by square brackets. For example, consider the following calls:

```
printNumbers(15);
```

```
printNumbers(5);
```

These calls should produce the following output:

```
[1] [2] [3] [4] [5] [6] [7] [8] [9] [10] [11] [12] [13] [14] [15]
```

```
[1] [2] [3] [4] [5]
```

You may assume that the value passed to *printNumbers* is 1 or greater.
